Obtaining a license manually using the ARM website. Sending the license to us through the mail. If you have questions about these solutions, send an email to licensing-experts-help@isocpp.org. Parse json object to jsonArray I need to parse the following json object and get the number of products [{"id":1,"name":"Product 1"}, {"id":2,"name":"Product 2"}] I have this code to parse json, but it doesn't seem to work as it only returns the number of objects in data. public void testJSON() { String url = ""; URL url1 = new URL(url); HttpURLConnection urlConnection = (HttpURLConnection) url1.openConnection(); urlConnection.setRequestMethod("GET"); urlConnection.connect(); InputStream inputStream = urlConnection.getInputStream(); BufferedReader bufferedReader = new BufferedReader(new InputStreamReader(inputStream)); StringBuilder stringBuilder = new StringBuilder(); String line; while ((line = bufferedReader.readLine()) != null) { stringBuilder.append(line).append("\n"); } bufferedReader.close(); String response = stringBuilder.toString(); JSONObject object = new JSONObject(response); JSONArray jsonArray = object.getJSONArray("data"); //System.out.println("Count: "+jsonArray.length()); 82157476af
